Learn about the beginning of cinema and make your own early animation devices

The day begins with an overview of the history and principles of animation.

Your students will learn about zoetropes and thaumatropes, and then hear about more contemporary stop-frame techniques such as pixilation and plasticine-animation.

You students are then introduced to stop-frame software and they create a short animation using their new skills.

We will set all the films to music and at the end of the day watch them all together.

Our workshops can all be customised to students' individual learning requirements. We can customise all of our workshops to individual learning requirements.

All workshops run from 10:00 - 15:00 and take place at Tyneside Cinema Pop-Up Film School, Pilgrim Street, Newcastle upon Tyne, NE1 6QG.
